Instructions for installing the b11-color printer to Windows (win7 or win10)

1. Download b11-color.zip (https://oregonstate.box.com/v/b11-printers)
2. Extract files to a temporary location
3. From the files unzipped, double click on the "add-b11-color" command. This command will take a minute or so to complete. It installs the printer driver and sets up the connection to the printer.

   NOTE: Do NOT run the add-b11-color command directly from the zip file. The files need to be extracted first. (c:\temp is a good location to unzip (extract) these files)

You should now have a "B11-Color" printer in your "Devices and Printers" list.
You can delete the b11-color.zip and all the extracted files. They are no longer needed.

Right click on "b11-color and click on "Printer properties".
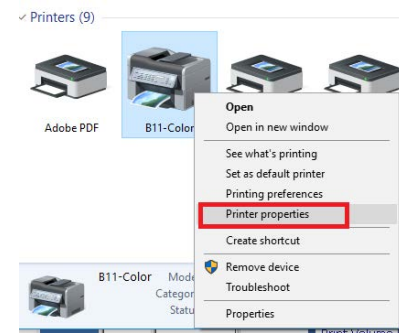

Click on the "Device Settings" tab.
Find "Device Type:" and change to "Color".
Click "OK" to close the dialog box.

You should now have the b11-color installed and properly configured.
