**Instructions for installing the b11-copier printer to Windows (win7 or win10)**

1. Download b11-copier.zip   (https://oregonstate.box.com/v/b11-printers)
2. Extract files to a temporary location
3. From the files unzipped, double click on the "add-b11-copier" command. This command will take a minute or so to complete. It installs the printer driver and sets up the connection to the printer.

   NOTE: Do NOT run the add-b11-copier command directly from the zip file. The files need to be extracted first. (c:\temp is a good location to unzip (extract) these files)

You should now have a "b11-copier" printer in your "Devices and Printers" list.
You can delete the b11-copier.zip and all the extracted files. They are no longer needed.

Right click on "b11-copier and click on "Printer properties".

Click on the "Accessories" tab.
Within "Select Model" pick "MP 5055".
Click "Update Now".
Under "Options" click on Tray 3 (LCT).
Click on "OK" to close the dialog.

You should now have the b11-copier installed and properly configured.
